Chapter 267: The Creation of Kaijus and Jaegers

The Twelve Divine Beings, ever pushing the boundaries of their creative power, turned their attention to a concept that had fascinated mortal minds for generations: the colossal creatures known as Kaijus and the machines designed to challenge them, Jaegers. These awe-inspiring creations were given their own realms to flourish, thrive, and serve a higher purpose in research and development.

---

1. The Kaiju Realm: A World of Titans

The Kaijus were brought into existence as a testament to the sheer creativity and might of the Twelve Divine Beings.

Kaiju Solar System:
The Kaijus were granted an entire solar system, each planet designed to accommodate the unique needs of these massive creatures.

King Kongs roamed jungle-covered planets with towering trees.

Godzillas ruled over volcanic and oceanic worlds.

King Ghidorahs and Rodans soared in planets with thick atmospheres, perfect for flight.

Mothras inhabited planets teeming with mana-infused flora.

Diversity of Kaijus:

Land-Based Kaijus: Behemoths, Skull Crawlers, and Warbats thrived on rugged terrains.

Aerial Kaijus: Rodans and Mothras dominated the skies.

Aquatic Kaijus: Scyllas and other water-based titans ruled the deep seas.

Isolation for Safety:
To maintain control and ensure the safety of other realms, the Kaiju realm was sealed off entirely. No portals or connections existed, making it a self-contained ecosystem.

---

2. The Jaeger Realm: Guardians of Balance

To balance the overwhelming power of the Kaijus, the Twelve Divine Beings created Jaegers—giant mana-powered machine-robots.

Jaeger Solar System:
A neighboring solar system was designated as the base for the Jaegers, equipped with advanced workshops and training facilities.

Shadow Soldier Pilots:
Sung Jin-Woo's shadow soldiers were assigned to pilot the Jaegers. These soldiers were enhanced with unparalleled reflexes and mana control, making them perfect for the task.

Jaeger Arsenal:

Each Jaeger was equipped with mana-based weaponry, such as plasma blades, mana cannons, and energy shields.

Their cores were powered by Sung Jin-Woo’s shadow energy, ensuring near-infinite durability and efficiency.

Types of Jaegers:

Titan Class: Designed for combat against Godzilla-sized Kaijus.

Aerial Class: Specialized for battling flying Kaijus like Mothras and Rodans.

Aquatic Class: Tailored for underwater conflicts.

---

3. Purpose of Creation

The creation of Kaijus and Jaegers served more than just entertainment or experimentation—it was a project of significant research and development.

Combat Simulation:

The interactions between Kaijus and Jaegers provided insights into large-scale battles, strategy, and mana manipulation.

Technological Advancements:

The Jaegers represented the pinnacle of mana-powered technology, driving innovation in energy efficiency, weapon design, and defensive systems.

Ecological Studies:

Observing Kaiju ecosystems allowed the Twelve Divine Beings to understand the dynamics of large-scale, mana-infused environments.

---

4. Guardianship and Containment

The Jaegers were not only tools for research but also guardians to ensure the Kaijus remained within their realm.

Constant Surveillance:

Shadow soldier pilots patrolled the borders of the Kaiju realm, ensuring no creature left its designated area.

Intervention Protocols:

In the event of an overpopulation or territorial conflict, the Jaegers intervened to restore balance.

---

5. A Legacy of Creation

The Kaiju and Jaeger realms stood as marvels of divine creativity, a blend of raw power and technological brilliance.

Endless Potential:

These realms continued to evolve, with new species of Kaijus and improved Jaegers being developed over time.

A Testament to Power:

The existence of these realms was a reflection of the Twelve Divine Beings’ limitless capacity to create, innovate, and maintain order in the multiverse.

Through the creation of Kaijus and Jaegers, the Twelve Divine Beings further solidified their legacy as the ultimate creators and protectors of life and innovation.
